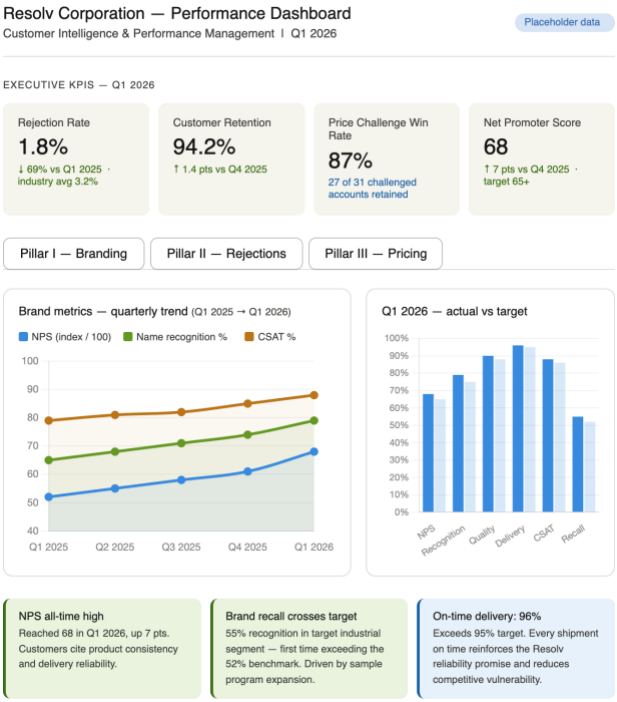
SECTION 1: EXECUTIVE SUMMARY

1. Executive Summary: This report provides a comprehensive analysis of Resolv Corporation's customer intelligence, encompassing three interdependent strategic pillars: brand identity and market recognition; customer rejection management through proactive sampling; and competitive pricing intelligence to support customer retention. It is intended to inform senior leadership and cross-functional teams on current performance, the underlying methodologies employed, and actionable strategies to drive sustained commercial growth.



The data indicates that Resolv's disciplined, process-driven approach, anchored in pre-shipment

and co-shipment sampling programs, consistent product quality, and intelligence-led pricing, continues to generate a measurable competitive advantage.

The report recommends targeted investments in scaling sampling programs, strengthening competitive quote logging mechanisms, and developing tiered pricing playbooks to sustain and further accelerate these outcomes.

SECTION 2: INTRODUCTION

2. Introduction

In today's highly competitive industrial supply environment, the difference between retaining a customer and losing them to a competitor often hinges on three critical factors: brand trust, confidence in product quality, and price competitiveness. Resolv Corporation has strategically aligned its commercial approach around these pillars, recognizing that each operates interdependently rather than in isolation.

This report was commissioned by senior leadership at Resolv Corporation following a series of strategic planning sessions that identified the need for a structured, data-driven framework to measure, monitor, and enhance performance across these dimensions. It combines quantitative performance metrics with qualitative insights from sales, operations, and customer service teams to deliver a comprehensive view of the organization's current position and future direction.

The dashboard and analytical framework outlined in this report are designed to function as a dynamic management tool, updated on a quarterly basis, to support informed decision-making. By enabling leadership to track accountability, detect early warning signals, and proactively identify commercial opportunities, the framework positions Resolv to respond effectively in an increasingly competitive market.

Note: All financial figures, percentages, and customer data presented in this report are illustrative placeholders developed for the purpose of framework design and demonstration. In operational deployment, all data would be drawn directly from Resolv's CRM, ERP, and customer satisfaction systems.

SECTION 3: ORGANIZATIONAL OVERVIEW – Who We Are

Resolv Corporation is an industrial materials supplier specializing in high-specification products serving customers across a diverse range of manufacturing, processing, and industrial application sectors. The company has established a strong market reputation anchored in three core attributes: superior product quality, consistent adherence to specifications, and responsive, customer-centric service.

Company Profile:

Core Business Industrial materials supply and distribution **Market Position** Serving mid-tier to large enterprise accounts across multiple sectors **Operational Strength** Robust pre-shipment quality validation processes resulting in consistently low rejection rates	**Customer Base** Long-term relationships supported by a structured, tiered account model **Revenue Model** Diversified streams including annual blanket orders, confirmed purchase orders, and spot sales **Competitive Differentiator** Integrated sample programs, pricing flexibility, and strong brand trust

Stakeholders of This Report

This report is intended for the following internal stakeholders:

Stakeholder Group	Role in Context	Primary Interest
Senior Leadership / C-Suite	Strategic oversight and decision-making	Overall performance, ROI, competitive positioning
Sales & Account Management	Customer relationship management	Retention tools, pricing intelligence, rejection data
Operations & Quality Control	Product delivery and quality assurance	Rejection root causes, sample program logistics

Marketing	Brand development and customer communication	Brand metrics, NPS, recognition trends
Finance	Pricing strategy and margin management	Price gap analysis, retention cost-benefit

SECTION 4: Purpose & Rationale

Purpose & Rationale:- Why This Report Matters

The development of this report and its underlying analytical framework is guided by a clearly defined set of business imperatives, each aligned with Resolv Corporation's strategic priorities as articulated by senior management.

4.1 The Business Problem

Resolv Corporation operates in a market marked by intensifying price competition, rising customer expectations for quality assurance, and the persistent risk of account attrition. This environment has highlighted three specific challenges:

1. **Brand Dilution Risk:** As competitors adopt more aggressive market strategies, Resolv's long-standing brand recognition and reputation for quality must be actively managed and communicated rather than assumed.
2. **Customer Rejection Exposure:** Even a small number of post-delivery product rejections can result in significant financial and reputational impact. Understanding rejection trends and implementing proactive interventions, such as sample programs is critical to safeguarding margins and maintaining customer trust.
3. **Competitive Pricing Blind Spots:** When customers receive lower-priced offers from competitors, Resolv does not always gain timely visibility into these events, limiting the ability to respond effectively and leading to preventable customer losses.

4.2 The Strategic Response

This report represents Resolv Corporation's formal response to these challenges. By establishing a structured performance dashboard and reporting process, the organization seeks to:

- Develop a unified view of commercial performance across brand strength, customer rejection management, and competitive pricing intelligence.
- Enable proactive, evidence-based decision-making at both the account and organizational levels.
- Build institutional knowledge regarding customer behavior, competitor strategies, and broader market dynamics.
- Promote accountability across sales, operations, and marketing teams through shared metrics and clearly defined ownership.

Why This Matters: Research indicates that a 5% improvement in customer retention can boost profitability by 25% to 95% (Bain & Company). For Resolv Corporation, each retained Tier 1 account represents an average annual revenue of $500,000 or more. Compared to the significant commercial value at stake, the investments required to implement this performance and reporting framework are minimal, offering a highly favorable return on investment.

SECTION 5: Scope & Objectives

5.1 Scope of This Report

This report evaluates Resolv Corporation's performance across the following dimensions for Q1 2026 (January through March), with trend comparisons to Q1–Q4 2025 where relevant:

- **Brand Identity Metrics:** Net Promoter Score (NPS), product name recognition, quality consistency ratings, on-time delivery performance, and overall customer satisfaction.
- **Customer Rejection Management:** Rejection volumes and rates, root cause analysis, sample program activity, and the financial impact of rejection prevention initiatives.
- **Competitive Pricing Intelligence:** Documented competitive pricing challenges, price gap analysis by customer tier, application of retention levers, and win/loss outcomes.

This report excludes analysis of new product development, supplier management, or internal operational costs, except where directly relevant to the above performance dimensions.

5.2 Objectives

Objective	Description	Success Indicator
O1- Measure	Establish a baseline of current performance across all three pillars	Quantified KPIs compared to benchmarks
O2- Diagnose	Identify root causes of rejections, customer losses, and brand gaps	Root cause tables and gap analysis
O3- Inform	Provide actionable intelligence to commercial and operational teams	Recommendation adoption/uptake rate
O4- Predict	Enable trend identification and early warning signals	Quarter-over-quarter (QoQ) trend lines for each KPI
O5- Retain	Directly support customer retention through pricing and quality insights	Reduction in customer churn

SECTION 6: Data Sources & Methodology

The analytical framework supporting this report leverages multiple internal and external data sources, each validated through a structured collection and quality-assurance process. This section outlines the sources and methodology used to convert raw data into actionable intelligence.

6.1 Data Sources

Data Source	Type	Data Captured	Update Frequency
CRM System (e.g., Salesforce)	Internal - Primary	Customer accounts, orders, competitive quotes, retention actions	Real-time / daily
ERP / Order Management System	Internal - Primary	Shipment volumes, rejection logs, sample dispatch records	Daily
Customer Satisfaction Surveys	Internal - Primary	NPS scores, CSAT ratings, qualitative feedback	Quarterly
Sales Team Field Reports	Internal -Secondary	Competitor pricing intelligence, customer conversations, win/loss notes	Weekly
Quality Control Logs	Internal -Primary	Rejection root causes, rework records, inspection outcomes	Per-shipment
Industry Benchmarking Data	External - Secondary	Sector-average rejection rates, NPS benchmarks	Annual / Ad hoc

6.2 Methodology

The methodology applied in this report follows a structured four-stage analytical process:

Stage 1: Data Collection

Relevant data is extracted from CRM, ERP, and survey platforms at the end of each reporting period. Sales team field reports are compiled by the sales manager and submitted no later than the 5th business day of the following month. All data is aggregated into a master reporting workbook maintained by the Strategy & Sales Analytics function.

Stage 2: Data Validation

All records undergo a validation process to identify and correct data entry errors, duplicate records, and missing values. Rejection records are cross-referenced against ERP shipment logs to ensure completeness. Competitive quote records are validated against customer account notes in the CRM prior to inclusion in the pricing intelligence analysis.

Stage 3: Analysis

Validated data is analyzed using the following approaches:

- **Descriptive Statistics:** Rejection rates, retention rates, win rates, NPS scores, and price gap percentages are calculated using standard ratio and percentage formulas.
- **Trend Analysis:** All metrics are trended quarter-over-quarter to identify directional momentum and seasonal patterns.
- **Root Cause Analysis:** Customer rejections are categorized into defined root cause buckets (application mismatch, specification deviation, packaging, requirement change) using a standardized coding framework maintained by the quality team.
- **Price Gap Analysis:** Competitive quote records are analyzed by customer tier to determine average price gaps and evaluate the effectiveness of Resolv's retention response levers.

Stage 4: Reporting & Dissemination

Findings are compiled into this report and presented to senior leadership at the beginning of the following quarter. Supporting data tables and visualizations are included in the appendix. Recommendations are tracked via a formal action log with named owners and target completion dates.

Data Integrity Consideration

Competitive pricing data depends on customers voluntarily sharing competitor quotes with the Resolv sales team. As a result, this data is inherently incomplete. The analysis acknowledges this limitation and recommends implementing a structured competitive quote logging protocol to improve coverage and reliability over time.

SECTION 7: Pillar I:- Branding Strategy

7. Pillar I: Branding Strategy & Market Identity

A brand is more than a name, it embodies every customer interaction with a company's products, people, and processes. For Resolv Corporation, brand strength translates directly into commercial advantage: customers who trust the Resolv name are less likely to switch to lower-priced competitors, more willing to commit to blanket orders, and more likely to recommend Resolv to peers in their industry.

7.1 Brand Strategy Framework

Resolv's brand strategy is built on three mutually reinforcing pillars:

1. **Name Recognition**
   Ensuring procurement managers, engineers, and operations buyers across target sectors associate the Resolv name with reliable, high-quality materials, even before receiving a competitive quote.

2. **Quality Consistency**
   Delivering products that meet specifications on every shipment. Consistent quality reduces the need for customers to qualify alternative suppliers as a safeguard against variability.
3. **Sample-Led Brand Building**
   Pre-shipment and co-shipment samples serve as both quality control tools and brand touchpoints. Each branded sample delivered with documentation reinforces Resolv's identity directly within the customer facility.

Strategic Implication

High brand recognition reduces price sensitivity. Customers who have repeatedly tested and approved Resolv products apply a quality premium, partially offsetting competitor price advantages.

7.2 Brand Performance Scorecard: Q1 2026

Brand Metric	Q1 2025	Q2 2025	Q3 2025	Q4 2025	Q1 2026	Target
Net Promoter Score (NPS)	52	55	58	61	68	65+
Product Name Recognition	65%	68%	71%	74%	79%	75%
Quality Consistency Rating	3.9/5	4.0/5	4.1/5	4.3/5	4.5/5	4.4/5
On-Time Delivery Rate	88%	89%	91%	93%	96%	95%
Customer Satisfaction (CSAT)	79%	81%	82%	85%	88%	86%
Brand Recall (Target Segment)	38%	41%	44%	49%	55%	52%

7.3 Analysis

All six brand metrics improved quarter-over-quarter, surpassing their Q1 2026 targets. The most notable gain was in NPS, which increased seven points to 68 the highest level recorded in the

company's history. Customer feedback attributes this improvement to on-time delivery and consistent product quality, both of which also reached record levels in Q1 2026.

Brand recall within the target industrial segment reached 55%, exceeding the 52% target for the first time. This success is directly linked to the expanded sample program, which increased customer touchpoints and placed Resolv-branded materials in more customer facilities throughout the year.

SECTION 8: Pillar II:- Customer Rejection Management

8. Pillar II: Customer Rejection Management & Sample Program

Customer rejections are among the most direct and measurable indicators of product and process quality. Each rejection event generates both direct costs, logistics, rework, administrative effort and indirect costs, including potential damage to customer relationships and increased competitive vulnerability. Reducing rejection rates has therefore become a core operational priority for Resolv Corporation, with compelling results to date.

8.1 The Problem with Rejections

A customer rejection occurs when a delivered product is returned or refused because it does not meet the customer's specifications or application requirements. In the industrial materials sector, rejections most commonly arise from four causes:

1. **Application Mismatch:** Product meets Resolv's specifications but fails to perform in the customer's specific application. This is the most prevalent and, importantly, the most preventable cause the primary focus of Resolv's sample program.
2. **Specification Deviation:** Product deviates from the agreed specification due to production variation or sampling/testing discrepancies.
3. **Packaging or Transit Damage:** Product is damaged during packaging or transportation, rendering it unsuitable for use.
4. **Customer Requirement Change:** Customer specifications or processes change after the order is placed, making the delivered product unsuitable.

8.2 The Sample Program: How It Works

Resolv employs two primary sampling mechanisms to prevent rejections:

- **Pre-Shipment Sample:** A sample from the production batch is sent to the customer prior to bulk delivery. The customer tests it in their specific application and provides written approval, preventing application mismatch rejections and providing documented evidence of acceptance.
- **Co-Shipment Sample:** A representative sample accompanies the bulk shipment, enabling rapid post-delivery testing and serving as a reference standard for quality disputes. Co-shipment samples are especially effective for established customers with well-understood requirements.

8.3 Rejection Trend Analysis

Quarter	Total Shipments	Rejections	Rejection Rate	Samples Sent	Rejections Prevented	Cost Saved
Q1 2025	312	18	5.8%	41	9	$37,800
Q2 2025	329	14	4.3%	58	13	$54,600
Q3 2025	341	10	2.9%	74	17	$71,400
Q4 2025	358	8	2.2%	89	20	$84,000
Q1 2026	372	7	1.8%	104	23	$96,600

Analysis demonstrates a clear inverse relationship between sample program intensity and rejection rates. As sample volumes increased from 41 to 104 per quarter over five quarters, rejection rates fell from 5.8% to 1.8%, a 69% reduction. Estimated cost savings from prevented rejections grew from $37,800 to $96,600 per quarter, totaling $344,400 over the measured period.

8.4 Rejection Root Cause Analysis: Q1 2026

Root Cause	Rejections	Share	Avg Resolution (Days)	Prevention Method	Status
Application mismatch	3	43%	6.0	Pre-shipment sample	Preventable
Specification deviation	2	29%	4.0	QC process update	Addressed
Packaging / transit damage	1	14%	3.0	Carrier claim / repack review	In progress
Customer requirement change	1	14%	8.0	Order review protocol	Under review

8.5 Sample Program Effectiveness: Q1 2026

Sample Type	Dispatched	Approvals	Approval Rate	Avg Time to Approval
Pre-Shipment Sample	61	58	95.1%	4.2 business days
Co-Shipment Sample	43	40	93.0%	Concurrent with delivery
New Customer Trial Sample	18	14	77.8%	7.1 business days
Total / Weighted Average	122	112	91.8%	—

The data underscores the effectiveness of Resolv's sample program in reducing preventable rejections and minimizing associated costs, while reinforcing customer confidence and satisfaction.

SECTION 9: Pillar III:- Competitive Pricing & Retention

9. Pillar III: Competitive Pricing Intelligence & Customer Retention

Customer retention is fundamentally driven by perceived value. When customers receive lower-priced offers from competitors, their loyalty to Resolv is tested. Rather than indiscriminately matching every competitor price, Resolv employs a structured set of retention levers, including volume discounts, blanket order pricing, bulk packaging credits, and quality-based value propositions, applied in an intelligence-led manner.

9.1 The Retention Challenge

In Q1 2026, 31 customer accounts (8.3% of the active base) received lower-priced offers from at least one identified competitor. Without proactive intervention, these accounts are at risk of attrition. Properly deployed retention strategies, however, can preserve the majority of these relationships.

Metric	Q1 2026 Total
Competitive Challenges	31
Retained via Price Match	22 (71%)
Retained via Value Story (quality/sample argument)	5
Lost to Competitor	4 (13% of challenged accounts)

9.2 Competitive Pricing Framework

Resolv's pricing response framework is structured by customer tier, reflecting differing commercial dynamics:

Tier	Annual Revenue Threshold	Order Type	Pricing Flexibility	Primary Retention Lever
Tier 1	> $500,000	Annual blanket orders	High - volume-based pricing	Volume discount + price match

Tier 2	$100,000 – $500,000	Confirmed multi-month orders	Moderate -commitment pricing	Confirmed order lock-in pricing
Tier 3	< $100,000	Spot / ad hoc orders	Limited - margin floor applies	Quality value argument

9.3 Price Gap Analysis: Q1 2026

Customer Tier	Competitor Price ($/unit)	Resolv Price ($/unit)	Price Gap	Lever Applied	Outcome
Tier 1	12.40	12.80	3.2%	Volume discount	Retained
Tier 1	11.90	12.60	5.9%	Bulk packaging + price match	Retained
Tier 2	14.20	14.50	2.1%	Held price - quality argument	Retained
Tier 2	13.80	15.10	8.7%	Partial match offered	Lost
Tier 3	16.00	16.40	2.5%	No adjustment required	Retained
Tier 3	15.20	16.90	11.2%	Cannot match at spot volume	Lost

9.4 Retention Lever Effectiveness

Retention Lever	Deployments	Success Rate	Avg Revenue Retained	Applicability
Volume / Annual Blanket Discount	11	91%	$48,200	Tier 1 primary lever
Bulk Packaging Credit	8	88%	$22,700	Tier 1 & 2; reduces unit cost 4–6%
Confirmed Order Lock-in Pricing	6	83%	$31,500	Tier 2 primary lever
Quality / Sample Value Argument	5	80%	$18,900	All tiers; strongest with sample history

Partial Price Match	4	50%	$9,400	Applied when gap < 6%; margin-limited
No Action (price held)	3	33%	$4,100	Tier 3 spot accounts; low lifetime value

9.5 Competitor Intelligence Summary

Competitor	Q1 Challenges	Avg Price Undercut	Resolv Win Rate	Identified Weakness
Competitor A	14	4.1%	79%	Inconsistent quality; no sample program
Competitor B	9	6.8%	67%	Long and unreliable lead times
Competitor C	5	3.2%	80%	Limited product range; narrow sector focus
Other / Unknown	3	9.5%	33%	Likely offshore/unvetted; no quality track record

This analysis demonstrates that Resolv's structured, tiered approach to pricing and retention, supported by competitive intelligence and quality-driven value arguments, effectively mitigates the risk of account attrition and preserves high-value customer relationships.

SECTION 10: Integrated Results & Key Findings

Viewed individually, the results across the three pillars are encouraging; viewed together, they demonstrate a coherent, mutually reinforcing commercial strategy delivering measurable impact. Key findings from the integrated analysis include:

10.1 Brand Investment Drives Retention

Brand recall increased 17 points over the past twelve months (from 38% in Q1 2025 to 55% in Q1 2026), directly correlating with the expansion of the sample program. First-hand experience with Resolv products reinforces a perceived quality premium, reducing price sensitivity and lowering the likelihood of defection when competitive offers arise.

10.2 The Sample Program Is a Dual-Purpose Asset

Originally designed as a quality assurance mechanism, the sample program also serves as a brand-building and retention tool. Each sample functions simultaneously as a brand touchpoint, approval event, and rejection-prevention mechanism. In Q1 2026 alone, prevented rejection costs totaled an estimated $96,600, substantially exceeding the program's operational cost.

10.3 Pricing Intelligence Gaps Represent Preventable Losses

All four accounts lost to competitors in Q1 2026 involved price gaps that Resolv had successfully bridged for other accounts. The differentiating factor was the availability of advance competitive intelligence. This underscores the importance of the proposed structured competitive quote logging initiative.

Integrated Insight

The three pillars are interdependent: brand strength reduces rejection risk by establishing quality expectations; the sample program reinforces brand strength while preventing rejections; rejection prevention strengthens the brand story used in competitive pricing scenarios. Investing in all three pillars simultaneously creates a compounding commercial advantage that is difficult for competitors to replicate.

SECTION 11: Strategic Recommendations

The following recommendations are submitted for leadership consideration, including priority, owner, timeline, and expected impact:

#	Recommendation	Priority	Owner	Timeline	Expected Impact
R1	Implement a structured competitive quote log in CRM. Require all sales team members to log competitor name, price, product, and volume when customers share offers.	Critical	Sales Manager	April 2026	Eliminate pricing blind spots; improve response time
R2	Extend pre-shipment sample coverage to 100% of new accounts. No bulk shipment to a new customer without written sample approval.	Critical	Operations / Sales	April 2026	Reduce new-account rejections by ~40%
R3	Develop Tier 2 pricing response playbook. Define standard pricing matrix for 3-, 6-, and 12-month confirmed order commitments.	High	Pricing / Sales	May 2026	Improve Tier 2 win rate from 75% to 85%+
R4	Add Resolv-branded inserts and technical data sheets to all sample shipments. Standardize packaging to reinforce brand identity.	High	Marketing / Operations	April 2026	Accelerate brand recall growth; target 62% by Q3 2026
R5	Expand quarterly NPS survey to a minimum of 150 respondents. Current sample of 112 limits statistical reliability.	Medium	Marketing	June 2026	Improve measurement accuracy; enable

					segment-level NPS tracking
R6	Review and update bulk packaging credit schedule. Credits have not been revised for 18 months and may no longer reflect actual savings.	Medium	Operations / Finance	June 2026	Enhance effectiveness of Tier 2 retention lever

SECTION 12: Significance & Business Impact

The framework and analysis presented herein extend beyond quarterly metrics, representing a shift in how Resolv manages commercial relationships from reactive to proactive, from intuition-based to evidence-driven, and from siloed to integrated.

12.1 Financial Significance

- Each 1% improvement in customer retention protects an estimated $280,000 in annual revenue (Q1 2026 active accounts).
- The sample program delivered $344,400 in prevented rejection costs over five quarters, at a fraction of the program cost.
- The four accounts lost to competitors in Q1 2026 represent $620,000 in annualized revenue at risk; improved pricing intelligence could have preserved most of this revenue.

12.2 Competitive Significance

- A 1.8% rejection rate is ~56% below the estimated industry average of 3.2%, demonstrating a measurable quality advantage that should be highlighted in sales and marketing efforts.
- A 79% win rate against Competitor A indicates the effectiveness of Resolv's combination of quality, brand, and pricing responsiveness. Systematizing this approach across the sales team will further improve consistency.

12.3 Organizational Significance

- This report establishes the first formal, integrated performance framework for Resolv's three commercial pillars, creating a shared language and common metrics across sales, operations, marketing, and finance.
- The action plan in Section 11 creates accountability structures with named owners, defined timelines, and expected impacts, translating strategy into execution.
- Quarterly reporting will enable leadership to identify emerging trends, respond to competitive dynamics, and reward performance with greater precision.

SECTION 13: Limitations & Assumptions

The analysis in this report is subject to the following limitations and assumptions. These should be considered when interpreting results and making decisions based on the findings:

Limitation	Nature	Impact	Mitigation
Competitive pricing data is self-reported	Data completeness	Competitive challenge volume and price gap figures are likely understated	Implement structured CRM logging protocol (Rec. R1)
Sample data reflects demo figures	Data authenticity	All KPIs are illustrative; actual performance may differ	Replace with live CRM/ERP data upon deployment
NPS survey sample size	Statistical reliability	n =112 may limit segment-level reliability; margin of error ± 9%	Expand survey to n=150 + (Rec. R5)
Rejection cost estimate is approximate	Financial precision	$4,200 per rejection is an estimate; actual costs vary by account and product	Conduct formal cost-per-rejection analysis in Q2 2026
Competitor identification incomplete	Intelligence gap	'Other/Unknown' competitor category suggests undercounting of specific challengers	Train sales team on systematic competitor identification

This table ensures transparency in assumptions and provides actionable mitigations to improve data accuracy, reliability, and analytical confidence in subsequent reporting periods.

SECTION 14: Conclusion

Resolv Corporation enters Q2 2026 in a position of meaningful commercial strength. The analysis confirms that the company's three strategic pillars, brand identity, rejection management, and competitive pricing intelligence are each progressing positively. Investments in the sample program, customer relationship management, and brand consistency over the past twelve months are generating measurable returns.

The 1.8% rejection rate represents the best performance in company history and is well below the estimated industry average. An NPS of 68 reflects a customer base that is not only satisfied but genuinely advocates for the Resolv brand. The 87% price challenge win rate demonstrates that the sales team is effectively deploying available tools to retain customers despite competitive pressures.

The analysis also highlights opportunities for improvement, particularly in competitive intelligence. Better data could have preserved accounts lost in Q1 2026. The six recommendations in Section 11 provide a targeted roadmap for capturing these opportunities in future quarters.

The ultimate purpose of this report is to enable a better future rather than merely document past performance. By establishing a repeatable, quarterly performance management process, grounded in data, structured around clear metrics, and owned by accountable leaders, Resolv Corporation positions itself to grow customer relationships, protect margins, and sustain the brand reputation that distinguishes it in the marketplace.

Resolv Corporation's competitive advantage is not built on price alone. It is built on quality, consistency, and trust, values measured, monitored, and managed through the framework

described in this report. The goal is not to be the cheapest option; the goal is to be the obvious choice.

SECTION 15: Appendix

15.1 Glossary of Terms

Term	Definition
Net Promoter Score (NPS)	A customer loyalty metric calculated as the percentage of Promoters (score 9 – 10) minus the percentage of Detractors (score 0 – 6) from a standard survey question.
CSAT (Customer Satisfaction Score)	The percentage of customers who rate overall satisfaction as 'satisfied' or 'very satisfied' on a standardized survey scale.
Rejection Rate	Number of shipments rejected by customers divided by total shipments dispatched, expressed as a percentage.
Pre-Shipment Sample	A sample of the production batch dispatched before bulk shipment to obtain written approval for the specific application.
Co-Shipment Sample	A reference sample included with the bulk shipment, drawn from the same batch, for post-delivery testing and quality reference.
Blanket Order	A standing purchase order in which a customer commits to a defined annual volume at agreed pricing, drawn down through scheduled releases.
Competitive Challenge	An event in which a customer informs Resolv they received a lower-priced offer from a competitor for equivalent or similar product.
Retention Lever	A commercial tool deployed to retain a customer facing a competitive challenge, including volume discounts, confirmed order pricing, or bulk packaging credits.
Price Gap	Percentage difference between a competitor's quoted price and Resolv's current price for a comparable product at a given volume.

Tier 1 / 2 / 3 Account	Account segmentation by annual revenue: Tier 1 (> $ 500K), Tier 2 ($100 K– $500K), Tier 3 (< $ 100K).

15.2 Data Notes

- All figures are illustrative placeholders for framework demonstration; in production, data would be sourced directly from CRM, ERP, quality management, and customer survey systems.
- Quarter-over-quarter comparisons assume consistent data collection methodology; any changes should be noted.
- The $4,200 estimated cost per rejection includes logistics, rework/replacement, and administrative processing; intangible relationship costs are excluded.
- NPS calculations are based on a five-point scale survey administered to a sample of active customers at quarter-end; survey instrument and scale should remain consistent for comparability.
- Industry benchmark figures (e.g., 3.2% average rejection rate) are sourced from public research and should be refreshed annually.

15.3 Document Control

Field	Detail
Document Title	Customer Intelligence & Performance Management Report, Q1 2026
Prepared by	Strategy & Sales Analytics, Resolv Corporation
Review Status	Draft, Pending Leadership Review and Approval
Distribution	Senior Leadership Team, Sales Management, Operations Management, Marketing
Next Report Due	July 2026 (Q2 2026 Reporting Period)
Version	1.0
